# John Meagher

Software Engineer and SRE with many years of experience in designing, building, and maintaining large scale distributed systems. Seeking a challenging role to utilize my diverse skills and experience in an innovative environment.

Remote or north Dallas, TX area

LinkedIn: <u>jpmeagher</u> **john@jmeagher.net** 

#### **EXPERIENCE**

# **Instacart,** Remote from Dallas, TX — Senior Software Engineer

Jan 2018 - Feb 2024

- Designed and built a set of Elasticsearch clusters with transparent multi-region failover and the proxy that enabled it. This saved hours of downtime each year.
- Automated safe EC2 host level maintenance on a large cluster of PostgreSQL nodes to apply security updates and address cloud hardware problems.
- Designed and built an approach for handling imbalance that saved millions of dollars in hosting costs while maintaining system reliability.
- Chaos tested systems including Redis, PostgreSQL, Golang, and Rust to improve overall reliability when host-level problems
- <u>Patent granted</u> for logging query structures while maintaining sizing information.

Skills used: Golang, Rust, Ruby on Rails, Python, AWS EC2, AWS ECS, PostgreSQL, Elasticsearch, Redis, Datadog, Terraform

# **Twilio**, San Francisco, CA — Senior Software Engineer

Apr 2017 - Dec 2017

- Developed automation for integrating Elasticsearch with internal deployment systems.
- Chaos testing and remediation of AWS EC2 hosted Elasticsearch.

Skills used: Scala, Kafka, Java, Elasticsearch, AWS EC2, Datadog

# **Twitter**, San Francisco, CA — Senior Site Reliability Engineer

Sep 2014 - Mar 2017

- Automated day-to-day operations for <u>very large Hadoop clusters</u> (10k+ nodes) including removing nodes for maintenance and re-adding them to the clusters.
- Worked closely with Twitter networking team to maximize available bandwidth for Hadoop without impacting front-end

#### **SKILLS**

Languages: Golang, Rust, Ruby, Java, Scala, Python, Bash

Cloud/SAAS: AWS, EC2, ECS, Datadog, GitHub, PagerDuty, OpsGenie

Infrastructure: Terraform, Puppet

Software: Elasticsearch, Hadoop, PostgreSQL

#### **LANGUAGES**

Native English, Very beginner Spanish traffic.

- Developed server and service problem detection and remediation tools used to manage hundreds of thousands of servers and millions of task instances.
- Site-wide load testing to ensure uptime during high traffic load times.

Skills used: Scala, Hadoop, NoSQL (Cassandra-like system), Mesos/Aurora, Network QOS

## **LivingSocial,** Washington, DC — Senior Biq Data Engineer

Jun 2013 - Aug 2014

- Tripled processing capacity of existing Hadoop cluster through job scheduling optimizations and system tuning.
- Built data platform with vetted data sets for analyst use.

## **Lotame**, Columbia, MD — Senior Software Engineer

Dec 2010 - May 2013

- Provide tools for ad hoc data analysis using Pig and Hive.
- Continually monitor and improve the batch data pipeline.
